

ADVANCED MEDICAL CENTER

Our Firm endeavored to create one of the first native, 'no irrigation' commercial projects in the area. The crux of this distinctive design and image for this site is the use of groundcover alternatives to turf. Instead the design implements the strategic use of shell, groundcovers, palms, and trees that have minimized the use of pesticides and fertilizers, effectively limiting maintenance input and cost in perpetuity. In addition, noise from lawn mowing and leaf-blowing equipment is eliminated as a tertiary benefit. The ultimate benefit is the pro-active approach to water restrictions, reduction in water cost, and lower cost to the end user of the initial irrigation system. Advanced Medical Center epitomizes form following function and a 'layered' benefits approach to the Environment as a whole.
